Allowable Subject Matter

1. Claims 7-13 are allowed.
2. The following is an examiner's statement of reasons for allowance: The instantly claimed invention is allowable over the cited prior art, because the cited prior art fails to disclose a doubly doped lithium niobate crystal, comprising the formula $\text{Li}_{1-x}\text{Nb}_{1+y}\text{O}_3:\text{Fe}_m\text{M}_{qn}$, wherein M is a member selected from the group consisting of Mg, Zn, and In, provided when M is Mg, Zn, In, provided when M is Mg or Zn, $q = 2$, and when M is In $q = 3$; wherein the doubly doped lithium niobate crystal has an average photorefractive response time from 3 to 5 seconds and a diffraction efficiency more than 68%.

Zhang et al. discloses a $\text{LiNbO}_3:\text{Fe}, \text{Mg}$ crystal, which may be utilized in optical processing, dynamic holography techniques (an optical storage material). Zhang et al. continues to disclose wherein M is Mg, Zn, or In. Zhang et al. continues to disclose wherein the Mg concentration is 4.6 mol%. Since, Zhang et al. teaches LiNbO_3 , it would have been obvious to one of ordinary skill in the art to meet the stoichiometric values of the congruent composition, because Zhang et al. clearly teaches wherein a $\text{LiNbO}_3:\text{Fe}$ composition is doped with magnesium, indium or zinc as a three-dimensional optical storage material, and wherein the Mg concentration is 4.6 mol%.

However, Zhang et al. fails to disclose wherein the doubly doped lithium niobate crystal has an average photorefractive response time from 3 to 5 seconds and diffraction efficiency more than 68%. Furthermore, the crystals

disclosed by Zhang et al. exhibit a response time of more than 35 seconds and the diffraction efficiency is just about 15%.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
